

Respectfully,

I believe that the FCC should not be involved in regulation of satellite radio. I pay for a service and get a quality product. The government has no business regulating what goes on the air over satellite radio, the market will do that.

I do not listen to FM radio any more and depend on XM radio for traffic and weather information.

Please reject the NAB petition 04-160. They are the "buggy whip" manufactures of radio and are out of touch with what the public demands.

Sincerely

RC
